EDUCATION

Guru Gobind Singh Indraprastha University

Bachelor of Technology, Electronics and Communication Engineering

New Delhi, India

2022 – 2026

TECHNICAL SKILLS

Languages: C++, Python, GoLang, MySQL, JavaScript, HTML/CSS

Libraries/Frameworks/Databases: LangGraph, LangChain, MCP, gRPC, ReactJs, NodeJs, ExpressJs, Mongoose, Tailwind, GSAP, MongoDB, Langchain

Skills: Agentic Workflows, Data Structures and Algorithms, Competitive Programming, Web Developement

Developer Tools: Git, VS Code, Vim, Postman, Claude Code

EXPERIENCE

Zomato

Software Developer (Intern → Full-time)

Jan 2026 – Present

- **Golang, gRPC, Redis, MySQL**
- Built the **Subscription Menu** end-to-end from scratch as part of Zomato's consumer menu team, owning merchant-to-consumer pipeline and coordinating across Ops, merchant, and consumer teams to ship to **20M+ monthly active users**.
- Optimized the Subscriptions Menu to serve **requests at P99 latency under 70ms**, ensuring fast experience at scale.
- Diagnosed filter-logic failures as the dominant cause of subscription menu page errors and redesigned the filter system with fallback handling, dropping error rate from a stable **1-2% to 0.1%**.
- Applied **Zstd compression** with a trained dictionary to a per-restaurant Redis key group, optimizing its memory by **35%** and overall cluster memory by **5%**.
- Built a reusable **boolean rule engine** to express complex **regular expression filtering logic** in a clean, composable way, improving maintainability and reducing ad-hoc conditional code.
- Implemented production-grade guardrails in Go preventing subscription items from leaking into unintended consumer flows, ensuring correctness across the subscription product surface.
- **Fixed 10+ bugs** across core app flows, improving reliability and reducing user-visible failures.

Google

Software Engineer Intern

June 2025 – Sept 2025

- **LangChain, LangGraph, Python, Vertex AI, RAG, MCP Servers**
- Built a **multi-agent system** to autonomously resolve bug tickets and user queries using GDCH documentation, **cutting manual workload by 35%**.
- Built **3+ MCP Servers** and **15+ tools** for the Agent to use in order to perform necessary tasks
- Designed a **scalable, modular architecture** ensuring seamless **alignment with Google Distributed Cloud's evolving infrastructure**.
- Developed core libraries enabling dynamic orchestration of agents and **cross-MCP server communication via AI-driven coordination**.

ACHIEVEMENTS

- Ranked **60** in IICPC (Sponsored by Hudson River Trading) regionals out of the 40,000+ participants
- Acquired **Expert** status on [Codeforces](#), with a peak rating of **1644** being **top 2%** in India, ranking **131st** out of 24,000+ participants in Round 1009 (Div 3) and **647th** out of 26,000+ participants in Round 1006 (Div 3).
- **First runner-up** in a Hackathon at IIMT Group of Colleges among 250+ teams and achieved a **top 16** position as part of a team in Vihaan 008 out of 300+ participating teams.
- Ranked **440** globally (**Top 0.2%**) on [CSS Battle](#) out of 250k+ users.
- Achieved a **4-star** rating on [Codechef](#) with a maximum rating of **1874**, ranking **113th** globally out of 31,000+ participants in Starters 126 Division 4.

PROJECTS

Scuba | *React, Vite, TypeScript, Claude Code, WebSockets, SQLite* | [Github Link](#)

May 2026

- Architected **Scuba, multi-agent orchestration** platform mirroring host **pseudo-terminals** to an interactive **mobile interface**.
- Engineered a **hierarchical orchestration** workflow using a persistent **supervisor agent** to programmatically provision, label, and **track worker agents** across isolated repositories.
- Developed an **asynchronous state machine** to parse terminal ANSI streams, auto-detecting execution blocks to map interactive choices to mobile inline buttons for non-blocking validation.
- Designed a session persistence layer via atomic serialization, enabling full stateful process restoration from a mobile device.
